

ORAL CANCER SCREENING

DID YOU KNOW ORAL CANCER TAKES A
LIFE EVERY HOUR ???

Dr. Charmoy has been doing visual oral cancer screenings during every recall visit. However, if detected at this point, it may be advanced.

To provide better care, Dr. Charmoy has introduced a new procedure into the office.

This procedure involves rinsing your mouth and then under a special light Dr. Charmoy can detect any signs of cancerous cells in their early stages. It is recommended to repeat this process yearly for smokers (past and present) and every 2 years for non-smokers.

This procedure is not covered by your insurance, but it is well worth your life.

Ask any staff member about this procedure.
